

15. (New)

A combination seed and yield cart for transporting seed to and from a field comprising:  
a chassis adapted to be towed by a vehicle;  
a hopper adapted to be removably attached to the chassis, the hopper having at least one  
compartment for holding seed, an auger for removing seed from the compartment, and a  
plurality of legs; and  
a weighing system mounted to the hopper capable of weighing the seed when the hopper is  
attached to the chassis and when the hopper is removed from the chassis.

16. (New)

The combination seed and yield cart of claim 15 wherein the hopper includes a frame  
extending between the legs and the weighing system is mounted on the frame.

17. (New)

The combination seed and yield cart of claim 16 wherein the weighing system is free  
from rotational torque when the chassis and hopper are moved by the vehicle.
